1.1 File List

Here is a list of all documented files with brief descriptions:

/home/lis1331/Documents/lecture/phy/computer/comp_hw/HW3/src/hw3.cpp	
Code for homework3 of Computer1 class in Yonsei University Minimize the action by Markov Chain Monte Carlo Method to solve Kepler problem	3
/home/lis1331/Documents/lecture/phy/computer/comp_hw/HW3/src/main.cpp	
Main program for homework3 of Computer1 class in Yonsei University Interactively reads initial condition, number of sine function used for guess, number of grid points to evaluate, number of iteration, step size and output file name then computes and saves solution	8
/home/lis1331/Documents/lecture/phy/computer/comp_hw/HW3/src/support.cpp	
Support functions for homework3 of Computer1 class in Yonsei University scale and add vector, evaluate sum and derivative of sine function, randomly move initial guess by step and evaluate the action of given path	9
/home/lis1331/Documents/lecture/phy/computer/comp_hw/HW3/src/include/hw3.hpp	
Headerfile for homework3 of Computer1 class in Yonsei University Minimize the action by Markov Chain Monte Carlo Method to solve Kepler problem	4

Chapter 2

File Documentation

2.1 /home/lis1331/Documents/lecture/phy/computer/comp_hw/HW3/src/hw3.cpp File Reference

code for homework3 of Computer1 class in Yonsei University Minimize the action by Markov Chain Monte Carlo Method to solve Kepler problem

```
#include "hw3.hpp"
```

Include dependency graph for hw3.cpp:

Functions

- `tuple< double, vector< double >, vector< double >, vector< double > > HW3 (double zeta_min, double t0, int n, int num_sine, int num_iter, double step, mt19937 &gen, uniform_real_distribution< double > &dist)`

2.1.1 Detailed Description

code for homework3 of Computer1 class in Yonsei University Minimize the action by Markov Chain Monte Carlo Method to solve Kepler problem

Author

pistack (Junho Lee)

Date

2021. 10. 10.

2.2 `/home/lis1331/Documents/lecture/phy/computer/comp_hw/HW3/src/include/hw3.hpp` File Reference

headerfile for homework3 of Computer1 class in Yonsei University Minimize the action by Markov Chain Monte Carlo Method to solve Kepler problem

```
#include <cmath>
#include <random>
#include <tuple>
#include <vector>
```

Include dependency graph for hw3.hpp:

This graph shows which files directly or indirectly include this file:

Functions

- `std::vector< double >` [scale_and_add_vector](#) (`std::vector< double > &v`, `double scale`, `double add`)
scale vector by scaler and add vector by adder
- `std::tuple< std::vector< double >, std::vector< double > >` [sum_of_sine](#) (`std::vector< double > &t`, `std::vector< double > c`, `int num_sine`)
evaluates sum of sine function with period $4(t_{max}-t_{min})$ weighted by coefficients and its derivative at given time t .*
- `std::vector< double >` [move_step](#) (`std::vector< double > &init_guess`, `double step`, `std::mt19937 &gen`, `std::uniform_real_distribution< double > &dist`)
randomly move initial guess by step
- `double` [eval_action](#) (`std::vector< double > &t`, `std::vector< double > zeta`, `std::vector< double > deriv_zeta`, `std::vector< double > theta`, `std::vector< double > deriv_theta`)
evaluates the action of given path
- `std::tuple< double, std::vector< double >, std::vector< double >, std::vector< double > >` [HW3](#) (`double zeta_min`, `double t0`, `int n`, `int num_sine`, `int num_iter`, `double step`, `std::mt19937 &gen`, `std::uniform_real_distribution< double > &dist`)
HW3: Solve Kepler problem via Markov Chain Monte Carlo Method see HW3.pdf for further detail.

Variables

- `const double pi = 3.141592653589793`

2.2.1 Detailed Description

headerfile for homework3 of Computer1 class in Yonsei University Minimize the action by Markov Chain Monte Carlo Method to solve Kepler problem

Author

pistack (Junho Lee)

Date

2021. 10. 10.

2.2.2 Function Documentation

2.2.2.1 eval_action()

```
double eval_action (
    std::vector< double > & t,
    std::vector< double > zeta,
    std::vector< double > deriv_zeta,
    std::vector< double > theta,
    std::vector< double > deriv_theta )
```

evaluates the action of given path

Parameters

<i>t</i>	time
<i>zeta</i>	zeta part of path
<i>deriv_zeta</i>	derivative of path, zeta part
<i>theta</i>	theta part of path
<i>deriv_theta</i>	derivative of path, theta part

Returns

the action of given path

2.2.2.2 HW3()

```
std::tuple<double, std::vector<double>, std::vector<double>, std::vector<double> > HW3 (
    double zeta_min,
    double t0,
    int n,
    int num_sine,
    int num_iter,
    double step,
    std::mt19937 & gen,
    std::uniform_real_distribution< double > & dist )
```

HW3: Solve Kepler problem via Markov Chain Monte Carlo Method see HW3.pdf for further detail.

Parameters

<i>zeta_min</i>	minimum value of zeta, for constraint motion $0.5 < \text{zeta_min} < 1$
<i>t0</i>	initial time
<i>n</i>	number of points to evaluate
<i>num_sine</i>	number of sine functions to guess
<i>num_iter</i>	number of iteration
<i>step</i>	step size
<i>gen</i>	random number generator (assume mt19937)
<i>dist</i>	distribution

Returns

tuple of minimum action, time and path(zeta, theta)

2.2.2.3 move_step()

```
std::vector<double> move_step (
    std::vector< double > & init_guess,
```

```
double step,
std::mt19937 & gen,
std::uniform_real_distribution< double > & dist )
```

randomly move initial guess by step

Parameters

<i>init_guess</i>	initial guess
<i>step</i>	step size\
<i>gen</i>	random number generator (assume mt19937)
<i>dist</i>	distribution

Returns

moved initial guess by step

2.2.2.4 scale_and_add_vector()

```
std::vector<double> scale_and_add_vector (
    std::vector< double > & v,
    double scale,
    double add )
```

scale vector by scaler and add vector by adder

Parameters

<i>v</i>	vector to scale and add
<i>scale</i>	scaler
<i>add</i>	adder

Returns

scale and added vector (scale*v+add)

2.2.2.5 sum_of_sine()

```
std::tuple<std::vector<double>, std::vector<double> > sum_of_sine (
    std::vector< double > & t,
    std::vector< double > & c,
    int num_sine )
```

evaluates sum of sine function with period $4*(t_{\max}-t_{\min})$ weighted by coefficients and its derivative at given time t .

Parameters

<i>t</i>	time
<i>c</i>	coefficients
<i>num_sine</i>	number of sine function to add

Returns

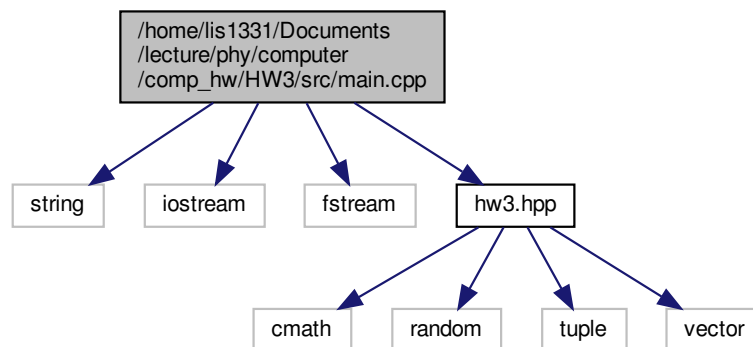

tuple of value and derivatives of the sum of sine function

2.3 `/home/lis1331/Documents/lecture/phy/computer/comp_hw/HW3/src/main.cpp` File Reference

main program for homework3 of Computer1 class in Yonsei University Interactively reads initial condition, number of sine function used for guess, number of grid points to evaluate, number of iteration, step size and output file name then computes and saves solution.

```
#include <string>
#include <iostream>
#include <fstream>
#include "hw3.hpp"
```

Include dependency graph for main.cpp:

**Functions**

- `int main (void)`

2.3.1 Detailed Description

main program for homework3 of Computer1 class in Yonsei University Interactively reads initial condition, number of sine function used for guess, number of grid points to evaluate, number of iteration, step size and output file name then computes and saves solution.

Author

pistack (Junho Lee)

Date

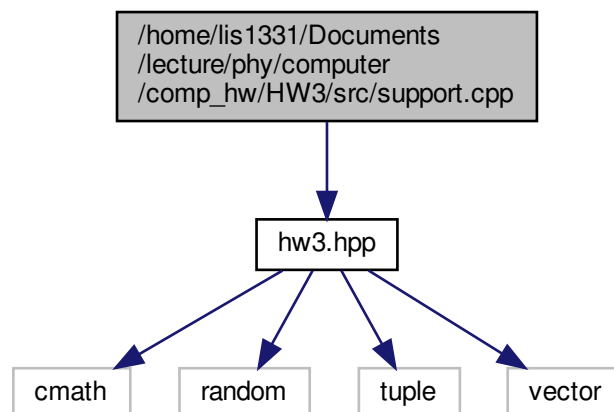

2021. 10. 10.

2.4 /home/lis1331/Documents/lecture/phy/computer/comp_hw/HW3/src/support.cpp File Reference

support functions for homework3 of Computer1 class in Yonsei University scale and add vector, evaluate sum and derivative of sine function, randomly move initial guess by step and evaluate the action of given path.

```
#include "hw3.hpp"
```

Include dependency graph for support.cpp:

Functions

- `vector< double > scale_and_add_vector (vector< double > &v, double scale, double add)`
- `tuple< vector< double >, vector< double > > sum_of_sine (vector< double > &t, vector< double > c, int num_sine)`
- `vector< double > move_step (vector< double > &init_guess, double step, mt19937 &gen, uniform_real_distribution< double > &dist)`
- `double eval_action (vector< double > &t, vector< double > zeta, vector< double > deriv_zeta, vector< double > theta, vector< double > deriv_theta)`

2.4.1 Detailed Description

support functions for homework3 of Computer1 class in Yonsei University scale and add vector, evaluate sum and derivative of sine function, randomly move initial guess by step and evaluate the action of given path.
